

What is the Vision of Humanity in the 21st Century?

Scritto da Administrator

We are in an epoch different to any other epoch in human history. The problems we are facing are global in nature. They include climate change, ever decreasing biodiversity, full use of the fresh water on the planet and underpinning all these – overpopulation. Without peace we will be unable to achieve the levels of cooperation, inclusiveness and social equity required to begin solving these challenges, let alone empower the international institutions needed to regulate them.

It is impossible to accurately portray the devastating effects that global challenges will have on us all unless unified global action is taken. Our shared challenges call for global solutions, and these solutions will require cooperation on a global scale unparalleled in human history.

Vision of Humanity is a strong proponent of the need to further study, advocate and act on peace. It groups together a number of interrelated initiatives focused on global peace which enjoy the support of a wide range of philanthropists, business people, politicians, religious leaders and intellectuals. It brings a strategic approach to raising the world's attention and awareness around the importance of peace to humanity's survival in the 21st century.

This website will focus on the major issues facing us in the 21st century and it is going to try and bring a balanced approach with factual information that is positive and solution based. We hope that this will help you make better choices to create the kind of future in which you wish to live.
