

Worldwide, 3.3 million deaths in 2012 were due to harmful use of alcohol, says a new report launched by WHO today. Alcohol consumption can not only lead to dependence but also increases people's risk of developing more than 200 diseases including liver cirrhosis and some cancers. In addition, harmful drinking can lead to violence and injuries. The "Global status report on alcohol and health 2014" provides country profiles for alcohol consumption in the 194 WHO Member States, the impact on public health and policy responses. (...)
