

(...) The Arctic plains are an eminent example of nature's untouched beauty: an endless nothing in which only few know how to survive. However, the truth is different. The Arctic ecosystem is under a serious threat, dangerous pesticides are silently accumulating here, with serious health effects on its inhabitants being only one of them. The recent developments in the Arctic area are a disturbing symbol of the often hidden global consequences of pollution at the national and local level that calls for a new system on International Environmental Governance. (...)
