

AMBIENTE

This seminar is part of the UNITAR Migration and Development Series. Over 20 million people were displaced by sudden-onset climate-related disasters in 2008 alone. Estimates have suggested that between 25 million to one billion people could move as a result of climate change over the next 40 years, with 200 million being the most widely cited figure. This one-day seminar aims to present a nuanced picture of the interrelation between migratory decisions and environmental degradation, exacerbated through climate change; and bring together the migration, development, climate change and environment perspective. This seminar is designed for the members of Permanent Missions. UN staff and interested representatives of civil society and the private sector.
